

Environmental Policy

QC Comms is committed to the development, implementation, and continual maintenance of environmental procedures and construction methods that comply with the objectives of relevant statutory obligations, community environmental expectations and site-specific project requirements.

QC Comms acknowledge that the nature of the business operations may have a direct impact on the environment. As such, due consideration of environmental concerns and impacts have been integrated into our risk assessment processes and management plans in order to minimise the environmental footprint and avoid damage or deterioration.

Management, supervisors, and team leads shall ensure that the proactive planning of all work activities focuses on the protection of the surrounding environment, promoting environmental awareness and encouraging accountability towards environmental preservation. QC Comms strive to achieve best practice in environmental management by ensuring that systems identify, control, and monitor environmental risks that may arise from its operations. Environmental targets, objectives and plans have been developed to support these initiatives and will be achieved through the recognition of a genuine appreciation for the environment and its ongoing preservation.

QC Comms is dedicated to conserving resources, recycling, and minimising waste, and protecting the environment from any type of pollution as a consequence of our projects. This commitment is thoroughly detailed within the company environmental management plan (EMP) and associated procedures. QC Comms shall promote a workplace in which all workers take personal responsibility for protecting the environment and are adequately trained to comply with environmental laws, regulations, and procedures.

We shall strive to continually improve our environmental performance by periodically reviewing our policy and management systems in light of current and planned future projects.

Steve Colley
 Managing Director
 QC Comms
 Revised July 2021
